

Rhodesia Road

Tender Submission | February 2026

1. Team

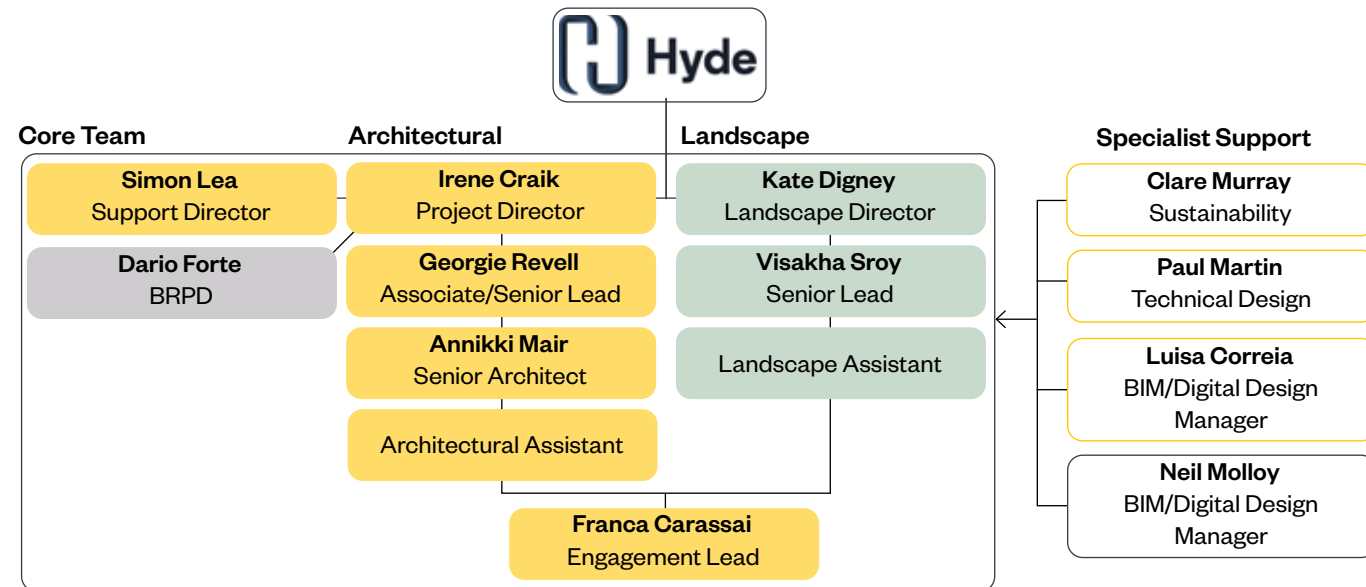

Please provide details of the architectural, landscape design and principal designer team that will be working on this scheme. This response should include:

- A brief overview of the organisation structure, key team members and how you will work together to meet the scheme deliverables.
- Examples of where the team have worked together on the architecture and landscape design of a relevant residential led scheme.

Your response should be no more than 2no. A4 pages inclusive of images

Our integrated team combines architectural, landscape and technical expertise to shape a high-quality proposal for Rhodesia Road. Through coordinated design and embedded sustainability, we will deliver a context-responsive and deliverable scheme.

Introduction

Our integrated team delivers architectural, landscape and BRPD expertise in-house at Levitt Bernstein, ensuring streamlined coordination. We bring proven experience in residential-led placemaking, local Stockwell knowledge, and expertise in sensitive stakeholder engagement. The team enjoys collaborating with our clients and other design consultants as well as with residents and local stakeholders – we are good at listening and learn lessons from our completed projects.

A. Organisation Structure and Team Overview

- **Irene Craik**, RIBA - Project Director
Irene leads the project, covering strategic matters, brief and design development, and relationships with planners. She ensures adequate resourcing and delivery to programme. With nearly three decades of LB experience in housing-led urban renewal and mixed-use residential development, including housing for older people, she has delivered complex projects of similar scale from feasibility through completion.
- **Simon Lea**, RIBA - Support Director
Simon provides objective design review and cover during absences. He brings knowledge from Lambeth Estates work and extensive housing design experience. His track record includes guiding challenging engagement processes at Aylesbury Estate and Morning Lane, Hackney.
- **Georgie Revell**, Associate - Project Lead
Georgie will be the day-to-day lead contact for Hyde and the design team and will coordinate the team within our studio. She has excellent experience of delivering complex housing and mixed-use schemes through to successful planning applications. She has led a creative

redevelopment of an old police station on a constrained site in Lewisham, with multiple overlooking and neighbour issues, two high density regen schemes in Ealing and a small scheme for autistic adults in Lewisham. Alongside project leadership, Georgie contributes to housing research, policy and design guidance, ensuring projects are informed by best practice and current standards.

- **Annikki Mair**, Senior Architect
Annikki brings strong experience in large-scale residential-led regeneration and mixed-use developments and will be the 'engine room' of the project, delivering drawings, presentations and documentation. She has worked across projects from early feasibility through planning and delivery, coordinating multidisciplinary input and responding to complex urban contexts. She has experience supporting resident and stakeholder engagement processes, ensuring proposals are responsive, well-coordinated and deliverable.
- **Visakha Shroy**, Senior Landscape Architect
Visakha has 11 years' experience delivering landscape and public realm strategies for residential-led regeneration and urban infill schemes. She specialises in co-design and stakeholder engagement, shaping inclusive, resilient external environments that support placemaking and long-term community value. Visakha has experience making constrained external spaces work hard to be inclusive and flexible. A highly relevant recent project is Down Lane Park: a new park masterplan devised through a process of co-design with local stakeholders, providing a benchmark for community-led masterplanning in Haringey.
- **Dario Forte**, Senior Architect - BRPD
Dario will take on the Principal Designer role and will be embedded within the team, ensuring design risk

management is integrated from Stage 1 onwards. His recent experience on two major housing projects with HRB buildings ensures compliance with Building Regulations and Gateway requirements, reducing risk and safeguarding programme.

- **Franca Carassai**, Landscape Architect - Engagement lead
Franca works within Levitt Bernstein's dedicated community engagement team who have expertise in working with existing residents and the wider community. Franca will assist with the preparation of engagement material and organising consultation events so the proposals can be easily understood and commented upon.

Specialist Support

Our Detail Studio of technical specialists will inform early fire strategies, buildability and compliance, conducting technical audits at Stages 2-3. Our in-house Digital Design Manager champions BIM and Revit between our teams. Sustainability: Clare Murray leads our in-house team of three full-time sustainability experts to inform early stage client decisions on appropriate environmental targets for the project.

How We Will Work Together

Stage 1 will be critical to arriving at a well-defined project brief and initial development direction that will act as the foundation for the remaining design development period. Working collaboratively with Hyde and the full design team to understand your aspirations and constraints will be essential to developing a realistic programme that everyone can agree to and support. We'll produce an outline design programme as early as possible and later replace it with a detailed design programme setting out critical paths and key information required from the architects and consultants to achieve the agreed programme. We will also work with Hyde to understand any critical approval processes that will need to be built into the programme—at the end of work stages, for example, or prior to planning submission.

Early resident engagement will be crucial to bringing residents on board, so this will be factored into the programme early and led by Franca (a member of our dedicated engagement team) and supported by other team members.

In our experience, our most successful projects are those with a strong design concept developed at the earliest stage, which then acts as the thread informing and running through later design decisions at planning and construction stages. This promotes a smoother-running programme and buy-in to the scheme by planners and the DRP, supporting a more straightforward journey to successful consent. Fluid communication will be key to meeting programme deadlines, and we will work across a variety of channels—

regular formal meetings, informal design workshops, email, and we'll always pick up the phone when a quick conversation can resolve an issue quickly. We will set clear sign-off procedures with Hyde to ensure that design proposals are fully understood and approved at the end of each key stage. This is particularly important at the end of Stages 1 and 2 to ensure that the final design development up to planning is a smooth process. We will aim to be flexible throughout the process, mindful that your ideas will evolve alongside our own.

Upfront structural design advice and integration with the underground line will be crucial to reducing risks around cost and buildability. We will work collaboratively with the design team, using informal workshops as well as DTMs. Landscape design will progress alongside architectural design, and we will develop strategies for consultation, services, and sustainability and consider waste management, environmental health, CDM, and other roles and responsibilities highlighted in the ITT.

Alongside the design development, we will run our own design risk tracker, keeping a live record of design issues that need resolving and could potentially cause delays unless we mitigate or resolve them. This will run in parallel with the broader project risk register, usually managed by the Employer's Agent. It will cover everything from planning risks to technical matters and issues relating to funding requirements.

B Key Projects Delivered Together Include:

Catford Police Station, Lewisham – A highly constrained part new build, part refurbishment project with integrated public realm which demonstrated sensitive massing and placemaking near existing residents. (Georgie, Irene and Kate)

Friary Park, Ealing – High rise estate regeneration delivering homes, community and retail uses with shared surface landscaping, town square and creative approaches to play and MUGA re-provision. (Georgie, Annikki, Kate and Irene)

Marian Court, Hackney – High rise housing in a constrained urban setting (Annikki and Irene)

Achilles Estate, Lewisham – High rise urban regeneration with new homes and transformed traffic calmed public realm which works alongside existing trees, priorities pedestrian movement and reduces impact of cars on the street scene. (Irene and Kate).

Douglas Bader Estate, Barnet – Large-scale estate regeneration with integrated public realm (Irene and Annikki)

2. Experience

Please provide 3 relevant examples of your work designing affordable housing schemes that have similar requirements and challenges to the Rhodesia Road site. Your services for these examples should have been completed in the last 3 years and at least one example must be within the London Borough of Lambeth. Your response should demonstrate an understanding of planning policy, the current regulatory environment, ability to assess a site to create best value and how you have created high-quality homes for residents. The response should include:

- a. How you overcame site constraints to maximize the number of homes
- b. How community engagement influenced your design
- c. How the landscape and architectural approach were integrated to create a sense of place.

Your response should be no more than 4no. A4 pages inclusive of images.

Plashet Road residential with on-site nursery, Newham

Introduction
Delivering fully affordable homes through collaborative engagement and landscape-led design in sensitive urban contexts

Levitt Bernstein has extensive experience of fully affordable residential schemes beyond the three presented case study projects, including multiple projects within LB Lambeth. This provides us with a clear understanding of Lambeth Local Plan policies and urban design expectations in inner London. We also have extensive experience working collaboratively on sensitive developments that are already experiencing resistance from existing residents.

One example of this is our work on the Aylesbury Estate in LB Southwark, where we were commissioned following the stalling of two separate masterplans and a failed resident vote. Our key approach was to build trust early and work alongside residents throughout the design process, ensuring housing and communal spaces were shaped

together. Working collaboratively with local residents from the earliest stages of the Aylesbury regeneration proved essential to its success. Since completion, this phase has won numerous national awards for high-quality design and placemaking – but most importantly, existing and new residents love where they live.

Our dedicated in-house engagement team and Place Studio (a team of Landscape Architects and Urban Designers) are integral to this process, allowing us to use innovative consultation methods to engage residents and involve them in the design journey from the outset. Our broad experience of challenging infill sites, managing existing trees and resolving overlooking issues, is well suited to this commission.

Case Study 1 - Central Hill Estate and Cressingham Gardens Estate, London Borough of Lambeth:
A resident-led regeneration strategy combining sensitive density optimisation, landscape placemaking and flexible delivery options across three Lambeth estates

Client: London Borough of Lambeth
Completed: 2033 (tbc)

Project Relevance
Levitt Bernstein were commissioned by Lambeth Council in 2024 to support Estate Regeneration Proposals for three mid-20th Century Council Estates in Lambeth: Fenwick Estate, Central Hill Estate and Cressingham Gardens. Previous attempts to regenerate these Estates had focused exclusively on full redevelopment approaches which had met with significant resident opposition including four separate judicial reviews in the case of one Estate. LB are currently leading a multi-disciplinary design team to develop a wide range of proposals with residents for all three Estates, using engagement to rebuild trust with residents and explore options ranging from 100% retrofit, infill, partial demolition through to full redevelopment with a view to securing planning consents for the future development of 1000 - 2,000 new homes across all three Estates.

a. Overcoming Site Constraints to Maximise Homes
Whilst not statutory listed, the design of each Estate is very distinctive and Estates each feature significant development constraints including adjacent conservation areas, steep topography, relocation of existing community facilities, extensive tree preservation orders and protected open greenspaces. During the optioneering process, the design team, led by LB, developed a series of detailed options for each Estate which optimized density on the site whilst responding sensitively to site constraints. Key to this

approach was working closely with QS and Valuation teams to understand hidden costs such as structural costs due to the steeply sloping sites. This was a key factor on our approach to Central Hill Estate, where layouts worked with the topography and existing service runs to ensure cost efficient buildings which avoid a series of mature trees/root protection areas and crucially minimize expensive retaining structures. At Cressingham Gardens our approach sought to maximize values for market sale and shared ownership homes by optimizing the number of homes with a view over adjacent Brockwell Park. In a series of hands-on planning workshops, a height strategy for new homes was agreed based on a requirement that new buildings would not significantly protrude above the existing treeline when viewed from key points in the adjacent Brockwell Park.

Using this constraint and designing around a large sewer running east-west across the site which was incorporated under a new street to avoid costly diversions, the size and height of a series of courtyard blocks were optimized to achieve a maximum density. At Fenwick Estate, density and adding value to new homes was driven by a strategy which sought to minimize the planning and cost risks associated with new HRB's whilst maximizing density. A large new community square was created at the centre of the Estate to form a neighbourhood heart. This was ringed by a cluster of taller buildings with lower, non HRB new blocks designed for the remainder of the Estate to optimize net:gross ratios and minimize the need for additional stairs. New buildings maximized density through careful use of double-loaded blocks where block sizes allowed along North-South routes

which avoided any single aspect north facing homes, and early assumptions on balcony types for costing. LB used a variety of 3d modelling tools such as Modelur and Revit wind and daylight analysis to quickly optimize high density approaches during early design stages to provide accurate, regular data to cost consultants.

b. Community Engagement and Design Evolution
A core objective of the project is to rebuild trust with residents through a clear and structured engagement process. LB, working with LCA, Lambeth's specialist engagement team, conducted a detailed analysis of previous engagement responses from both residents and statutory stakeholders (including planning and technical officers) prior to design development to ensure previous feedback informed any new proposals. This helped identify aspects of each Estate which were highly valued by residents, and where problematic areas needed higher levels of intervention. On both Central Hill and Cressingham Garden Estates, this focused on potential retention strategies of buildings which had high local value to existing residents such as housing terraces and a distinctive chimney. A series of phasing strategies were developed for both estates based on an agreed placemaking strategy which tested flexibility to retain buildings whilst still allowing a potential 100% new build approach in the future. Key to this approach was the Council's decant requirement to minimize the number of households which would need to move off-site during redevelopment to maintain community support. On the Fenwick Estate, options tested included providing existing house freeholders with like-for-like houses and maisonettes to reduce potential CPO risks against the impact this would have on overall densities and the ability to provide wider neighbourhood benefits such as enhanced community facilities and more open space.

c. Integrated Landscape and Architectural Approach
LB's inhouse landscape, urban design and architecture teams were involved from the outset to help develop strong, landscape-led placemaking strategies for each Estate to guide detailed design. Fundamental to this approach was re-integrating each Estate more closely with its surrounding neighbourhood and nearby facilities, providing a network of higher quality open space for community activities and reinforcing the unique character of each Estate. Key movement patterns and views were identified, which were reinforced with new routes providing clear visual links between public spaces to encourage movement through the neighbourhood, with new buildings added along key routes to provide overlooking and promote safety. On the Fenwick Estate, following a detailed baseline study, the existing greenspaces were identified as offering a poor range of play and amenity opportunities which lacked accessibility and were low in biodiversity. A new placemaking strategy created a single larger open space at the heart of the estate marked with taller buildings which aided wayfinding across the estate. This space provided higher quality play and more multi-generational amenity space, linked to a new community centre which replaced an existing facility without the need for the old centre to move off-site. At Cressingham Gardens, placemaking was structured around the retention of an existing protected greenspace with new buildings designed to maximize views of this space, increase overlooking to promote security, and provide a high-quality new backdrop to this space to increase values. A green/biodiversity strategy was developed for each Estate to maximize the retention of existing trees and ecological assets. This was key to the approach to the Central Hill Estate where early tree surveys identified the need for new buildings to be carefully set back from the main road frontage to preserve a series of mature trees which were a key character of the neighbourhood.

Case Study 2 - Plashet Road, London Borough of Newham:
Delivering 65, 100% affordable, Passivhaus-certified homes and nursery shaped by community engagement, sensitive urban integration and landscape-led place-making within a constrained London site.

Plashet Road, London Borough of Newham
65 homes, 100% affordable (social rent) + nursery | Passivhaus Classic | RIBA Stages 1–3+ and novation through delivery. Completed: 2024

Plashet Road showcases our ability to deliver high-density, 100% affordable housing within a constrained London context, while responding positively to planning policy, sustainability targets and community priorities — experience directly relevant to Rhodesia Road.

Commissioned by the London Borough of Newham and supported by GLA funding, the scheme provides 65 social rent homes, including 39% family dwellings, alongside a

nursery and communal courtyard. Planning was secured following a rigorous design and consultation process, with our services delivered through RIBA Stages 1–3+ and novation to the contractor through delivery.

a. Overcoming Site Constraints to Maximise Homes
In a similar way to Rhodesia Road, the site presented significant constraints: including twelve mature London Plane trees protected by TPOs, tight urban boundaries, and neighbouring residential properties sensitive to overlooking and daylight impacts. Through detailed site analysis, daylight/sunlight modelling and early engagement with planning officers and arboricultural consultants, we established a developable envelope that retained all

protected trees while optimising capacity. The building footprint is set back from the street and arranged around a shared open space which sits at the heart of the new community. It was carefully shaped designed to sit inside the root protection areas of the protected trees, creating a spacious green buffer around the perimeter, enhancing biodiversity. Front doors and communal entrances are approached along pathways through the planting, with views through to the garden within. The nursery is located to the south-west, creating a dedicated street frontage and drop-off / collection area. This approach enabled increased density without compromising amenity.

The brief required achievement of Passivhaus certification, so alongside optimising of the number of homes, the development was designed to be as responsive to Passivhaus design principles as possible and considerate of the site constraints. These considerations informed the initial site layout, building form and massing as the proposals developed, whilst ensuring compliance with London Plan requirements and optimising quality, daylight and overheating mitigation. By placing gallery access routes to the north or east, the majority of balconies and living rooms, which have inherently larger window areas, are south or west facing, benefiting from higher daylight levels and solar gain in winter months. Balconies benefit from a sunnier aspect at times they are more likely to be used and access routes are placed in locations where these benefits are less critical. This ensures homes are dual or triple aspect, optimising natural ventilation and daylight, whilst bringing activity to the central courtyard and encouraging active street frontages.

Three typical flat typologies were developed to improve viability and living comfort and stack through the building, helping to simplify the structural design and reduce construction costs.

b. Community Engagement and Design Evolution

Community engagement played a formative role in shaping the scheme. We undertook a comprehensive consultation process including two public exhibition and engagement events, an online engagement platform and direct mail-out to over 2,000 neighbouring properties. Feedback strongly supported the delivery of new council homes and

unanimously supported retention of the mature trees. The inclusion of the nursery facility was recognised as a benefit, in place of the loss of community space previously on the site. The design of the landscape buffer around the perimeter was enhanced to reduce perceived overlooking and reinforce privacy whilst promoting biodiversity. Entrances to cores and ground floor homes through this zone help improve passive surveillance and strengthen the relationship with the street.

The courtyard design evolved directly from consultation feedback, with doorstep play integrated discreetly within the landscape to promote informal use while maintaining a calm, shared amenity space. This collaborative approach ensured the scheme responded not only to planning policy but to lived experience and local priorities.

c. Integrated Landscape and Architectural Approach

Landscape strategy was integral to the architectural concept from the outset. Rather than treating the protected trees as a constraint, we structured the building and courtyard within them, creating a continuous planted perimeter that acts as a biodiversity corridor and visual buffer.

The communal courtyard provides semi-private shared amenity, overlooked by decks and balconies to foster community interaction and natural surveillance. Architecturally, the facade treatment is a modern interpretation of the surrounding vernacular of Victorian terraces, drawing on their materiality, details and patterns. Detail is focused at lower levels in relation to the human scale and height of the tree canopy. A red brick plinth with continuous diamond pattern wraps around the base of the building, while the courtyard reveals a paler brick and lighter interior. Brick reveals and precast sills to windows take reference from neighbouring streets, acting as architectural devices to enlarge their visual appearance. Together, the architectural and landscape approach creates a strong sense of place: active street frontages repair the urban grain, while the internal courtyard provides a calm, sociable heart for residents. The project showcases our comprehensive understanding of London planning policy, environmental performance standards through the delivery of high-quality affordable homes that balance density, sustainability and long-term value - principles directly applicable to Rhodesia Road.

Central Hill Estate and Cressingham Gardens Estate, London Borough of Lambeth

Plashet Road, London Borough of Newham

Friary Park, London Borough of Ealing

Case Study 3 - Friary Park, London Borough of Ealing

Delivering 100% affordable, Passivhaus-certified homes shaped by community engagement, sensitive urban integration and landscape-led place-making within a constrained London site.

Client: London Borough of Ealing
Completed: Phase 1a and 1b 2024

Friary Park is a residential-led mixed-use regeneration project in Ealing, West London. Levitt Bernstein began working on the project in 2013 as an estate regeneration project for Catalyst (now Peabody). In 2018 Catalyst formed a joint venture with Mount Anvil and the project was developed to a hybrid planning application.

The scheme delivers a significant uplift on previous 225 homes, by providing over 990 homes across four phases. The masterplan is mixed tenure housing with community facilities, retail space, and significant public realm. Phase 1a and 1b (500 homes) are now complete and occupied.

a. Overcoming Site Constraints to Maximise Homes

Our brief for Friary Park is similar to Rhodesia Road, and the site posed many of the same constraints, including varied and historic context and commitment to high quality new homes and public realm.

The estate is set amongst Edwardian streets, but next to the Acton Mainline Crossrail station. We proposed robust landscape-led urban design principles, carefully considered points of height and interrogated high-density building plans at mid-rise scale. We believe we can optimise the potential at Rhodesia Road using the same ambitious but considered approach to maximise homes.

The height strategy was developed with early input from daylight and sunlight consultants and supported by a townscape visual impact assessment. This ensured the proposed increase in density was tested and refined in response to overshadowing and impact considerations. During viability reviews, the masterplan proved robust and flexible enough to absorb additional height and mass, increasing the number of homes by approximately 150 during Stages 2/3. Our clear and robust design principles, coupled with a clear understanding of local planning policy enabled optimisation without redesign. The completed phases of the scheme have helped bring a new identity to the area whilst reflecting local character, provided much needed new mixed tenure homes, and delivered high quality, inclusive landscape and community facilities that promote safe travel and improve wellbeing.

b. How Community Engagement Influenced the Design

One of the most challenging aspects of Friary Park was the phasing to re-house estate residents with a 'move-once' policy. We were integral to this process, meeting with the steering group and understanding the needs of all the returning families. Residents in the first phase have been impressed by the 'spaciousness and practicality' of their home. At Rhodesia Road, the nursery will need to be relocated and we will bring our collaborative, listening

approach to these conversations to ensure the new space meets, and exceeds their needs.

The estate residents were also integral to our site-wide landscape and urban design principles. The estate suffered from anti-social behaviour, meaning the existing pockets of play space were underused and unsafe. We proposed a MUGA on the site as well as play-on-the-way along our green streets. The MUGA location and design was informed by residents. At Rhodesia Road, there are opportunities to be creative with the play areas, including an area for younger children outside the nursery and space for older children to the west of the site. We will consider this alongside adjacencies to existing residents and the wider links to green spaces to encourage independence for children and young people.

We faced significant objection from neighbours in the surrounding streets at Friary Park and held regular workshops and forums to understand their concerns and address them through the design development. We found that including estate residents and bringing open and honest discussions broke down barriers and enabled constructive discussions. Issues of privacy and overlooking were carefully considered through orientation, access locations and window/balcony layout. We understand that neighbouring residents at Rhodesia Road have returned a 'no' vote to a ballot for wider development and may be cynical about development. Our open and honest approach to listening and engagement will be valuable to build relationships.

c. Integrated Landscape and Architectural Approach

The original estate was characterised by cul-de-sacs, parking courts and poor-quality public realm. The new masterplan provides landscape-led structure, legible green routes, and better connections to the surrounding neighbourhood. We will bring this approach – considering both the site and future /wider context – to Rhodesia Road. A clear hierarchy of public, communal and private spaces was established as part of our design principles at an early stage. This approach means that increased density is easier to accommodate as the public realm is generous, inclusive, attractive, safe and welcoming. The landscape, which combines areas of public realm and MUGA provision at Rhodesia Road will be have to be equally hard-working, and has the benefit of mature trees and significant green space (in the Grantham Road estate) to enhance the setting.

The sense of place at Friary Park is created through a combination of the macro and micro design decisions that our architects, landscape architects and urban designers worked together on. Considering homes from the 'inside out' for residents and from the 'outside in' for visitors and neighbours. We are really proud of the high-quality homes and setting that we have been able to provide, whilst maximising density and integrating significant play provision.

3. Vision for Site

Please provide a high-level vision proposal for the mixed used residential development of the site which demonstrates your understanding of the brief, the site context and how you would make best use of space.

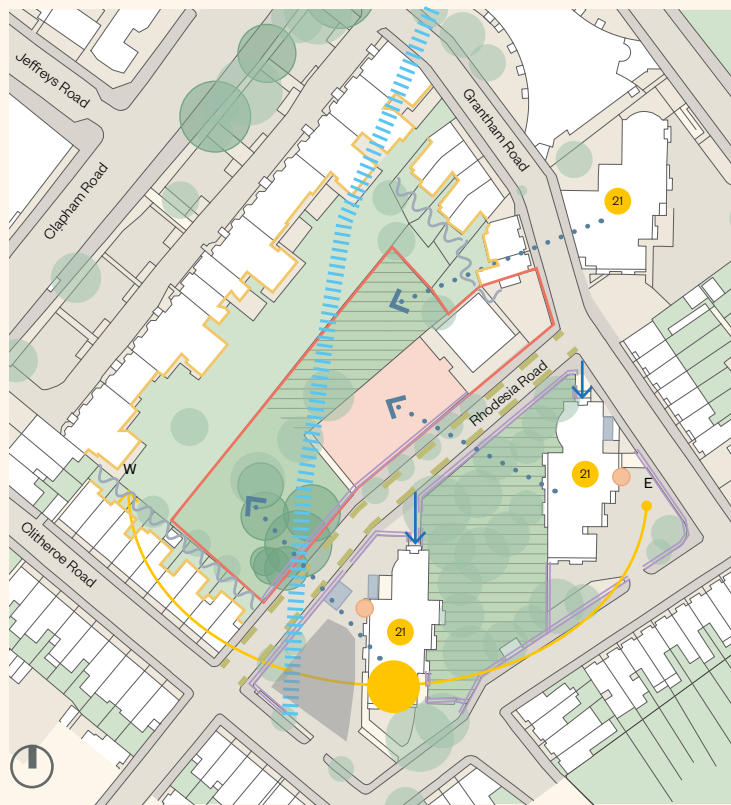

The total submission for parts a, b and c of this question should be no more than 6no. A4 pages, inclusive of images. This should be a highlevel design study and the limit on content is reflective of this level of work expected. We do not expect a fully resolved scheme, instead we are interested in ideas and innovative ways to approach the site with a creative attitude to the public realm to make a great setting for high-quality affordable homes. The submission should include:

- Site vision and layout, demonstrating how you would create a sense of place
- Building massing with suggested storey heights
- Indicative number of proposed new homes, demonstrating how you would make best use of the site to maximize the number of high-quality homes.

Friary Park viewed from surrounding low rise streets, London Borough of Ealing

VISION & UNDERSTANDING LOCAL PRIORITIES

CONSTRAINTS

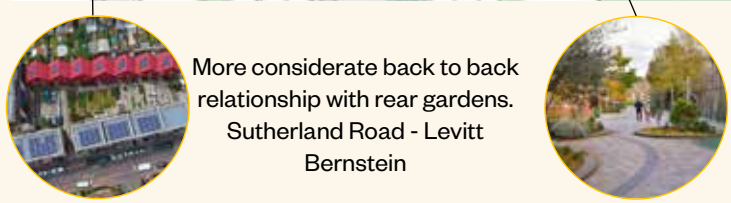

- The site
- Fenced Boundaries
- Existing Grade A trees
- Potential Overlooking
- Under utilised greenspace
- Underground tube line
- Homes with right of light
- Overshadowing from towers
- Existing street parking
- Significant building heights (storeys)
- Block entrances
- Dry riser inlets
- Bin stores
- Large area for vehicle turning

OPPORTUNITIES

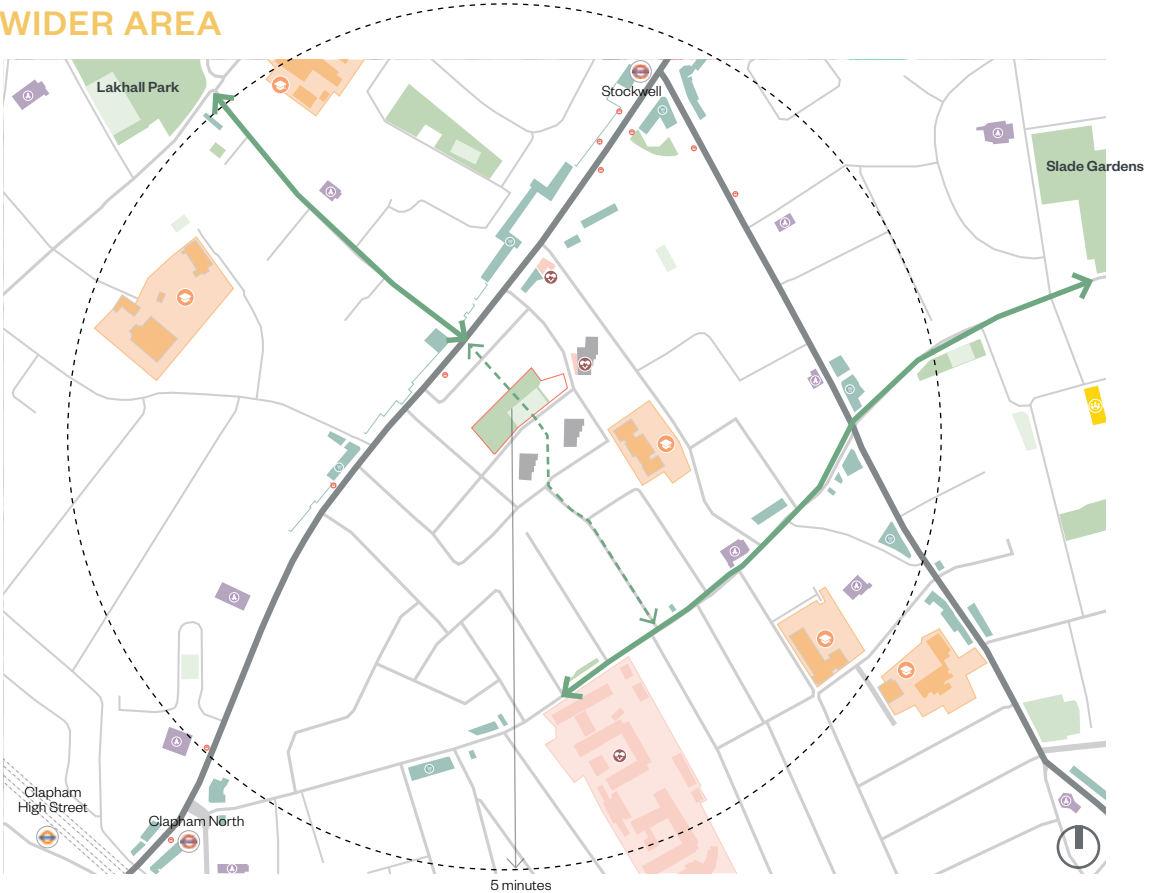

- Continuous frontages
- Continuation of terrace typology around site corner
- Interconnected play zones:
 - 1 Retain trees and enhance existing play space
 - 2 Parking reconfigured to create space for play
 - 3 Enhance residents' communal gardens
 - 4 Play street
 - 5 Piazza and play street
- Clustering private gardens
- Future potential to extend Jeffreys Road down through site
- Future potential for new blocks
- Potential future connection
- Gateway into Grantham Road Gardens
- Existing grade A trees retained
- Traffic calming to Rhodesia Road
- Levels adjusted for direct refuse and fire access from Rhodesia Road to free up turning area. Parking condensed to unlock areas for public realm improvements.
- Holistic review of parking with spaces focused towards the ends of the Road.

Opportunity for traffic calming along street with localised areas of 'play on the way'. Can take precedent from Van Gogh Walk in Stockwell.

More considerate back to back relationship with rear gardens. Sutherland Road - Levitt Bernstein

WIDER AREA

CONCEPT

WORKING WITH THE COMMUNITY

Our vision is to create an exemplar place-led development that maximises affordable housing delivery while demonstrating genuine sensitivity to the existing community and site context. By carefully balancing ambition with respect—achieving significant height where the site allows whilst maintaining sensitivity to overlooking and overshadowing at the edges—we ensure the development is both deliverable and neighbourly.

Central to our approach is creating safe, inclusive places that promote wellbeing for everyone. The proposed public realm and play space improvements are deliberately equitable, maximising the potential of green spaces to benefit all nearby residents, not only those moving to Rhodesia Road.

Landscape led place making. We have positioned landscape as the fundamental organising principle for the development, not an add-on. The MUGA is re-provided with a mosaic of high-quality, inclusive, safe & usable amenity spaces which accommodate a fuller range of local residents. This will be crucial to address Policy EN1A, which allows for a limited loss of open space quantity only if it results in improved quality, subject to a “very stringent community benefit test.” The retained Category A trees will also become celebrated focal points within a connected network of meaningful outdoor spaces.

Sensitive community engagement We understand this community has experienced significant uncertainty and disappointment. Our consultation will be transparent, responsive and focused on listening first. Working collaboratively with LSHA residents and the nursery operator, we'll clearly articulate the benefits of this more sensitively scaled development and rebuild trust through genuine co-design where appropriate. Early engagement with residents will be fundamental to shaping the design of key landscape character areas.

Navigating challenging site constraints Working closely with structural engineers from the outset, we'll develop a foundation strategy that responds intelligently to the Victoria Line below. Our massing proposals will be tested against BRE guidance to protect daylight and sunlight to LSHA properties, and we'll integrate arboricultural constraints into the site layout from day one, treating them as design opportunities rather than limitations.

Nursery re-provision A phased approach will allow the existing nursery to remain onsite during development. Secure external space will be provided in the corner of the site, supplemented with a new play street outside the front door - an ideal setting for parents dropping off and collecting children. A service bay along the play street will service the kitchen and refuse stores.

PLACEMAKING

Piazza
Encourages lingering and everyday social interaction through seating, play, and active edges

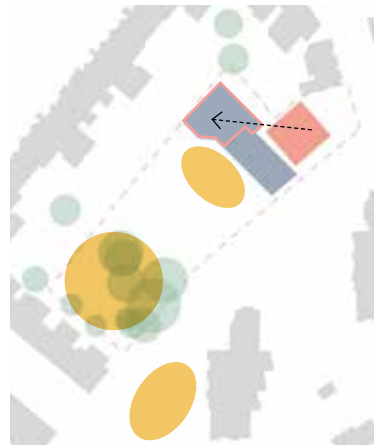

Rhodesia Road Play Street
Shared-surface design prioritising pedestrians and play while lowering vehicle speeds. (Van Gogh Walk - Stockwell)

A Space for Young People
Informal, non-prescriptive design allowing young people to take ownership and fostering a sense of belonging and identity. Existing parking is rationalised and condensed to optimise the space with existing access maintained to the tower dry riser inlet and a combined refuse store.

PHASING

Phase 1: Non HRB block and piazza built first with new nursery, with existing nursery retained onsite. Nursery moves in upon completion.

Phase 2: Tower, terraced housing and landscape spaces constructed to complete overall masterplan.

TYPICAL UPPER FLOOR

- 1B2P
- 2B3P
- 2B4P
- 3B5P
- 4B6P House

Neighbourhood Green
Small-scale play area embedded within the landscape to reinforce and strengthen family-focused uses

Grantham Road Gardens
Public realm improvements focused on enhanced lighting and tree-lined pathways creating a safer, more welcoming pedestrian environment

Rear Gardens
Residential courtyard with opportunities for gather and play

Rain gardens and other SUDs features
introduced for improved biodiversity and habitat.

STITCHING INTO THE NEIGHBOURHOOD

Inclusive and safe public realm
Our approach begins by reconfiguring the MUGA into a network of diverse, flexible play and social spaces that invite participation across all age groups. The strategy prioritises natural surveillance, accessibility and inclusive design principles, creating well-lit, overlooked spaces that feel safe, welcoming and active throughout the day.

At the heart of the proposal is a new **piazza**: a shared, predominantly hard-landscaped gathering space that balances movement and door step play spaces within a calm, human-scaled setting. This area provides spill-out space for the nursery and residential entrances and also safeguards potential future connections towards Clapham Road.

Grantham Road Gardens will provide an enhanced communal space for residents of the towers, developed in close consultation with them. A well-lit and legible path network encourages of them and strengthens the north-south active travel route towards Brixton. Pollinator-friendly planting boosts the garden's place as a home for nature.

The **Neighbourhood Green** combines gathering and growing with improved play facilities to create a space for multiple generations to enjoy. The input of local residents will be crucial in determining a green space which meets their needs.

A Space for Young People is provided with inclusivity in mind, using engagement with youth to create a well-overlooked, permeable and lit space which they feel an ownership over. Compared to the existing MUGA, it fosters social gathering and creating space for all ages & genders.

Rhodesia Play Street connects these four spaces together with shared-surfacing prioritising pedestrians and play on the way. Blue badge parking will be incorporated towards the ends of the street with SuDS and rain garden features to mitigate run-off.

MUGA: The proposed play strategy distributes higher quality and more accessible play spaces more evenly around the Grantham Road Estate. Should a formal ball court be required, there is an option, at a loss of 2 homes, to position a covered ball court under the building, which would then connect to the two adjacent play spaces. A recently planning-consented example of this approach is 291 Harrow Road for Westminster Council.

(Architect: Carter Gregson Gray)

Rhodesia Road

“Community Focused Placemaking”

2/3 storey terraced houses proposed along Rhodesia Rd to reduce overshadowing of existing houses along Grantham Road.

Proposed buildings mediate height between towers within Grantham Road Estate and lower buildings along Clapham Road.

Strong connection between new improved play spaces and upgraded landscaped areas within the Grantham Road Estate.

A piazza with door step play elements for younger children is activated by building main entrances and provides an entrance forecourt for the nursery. Rhodesia Road is transformed with rain gardens and 'play on the way' features

LIMITING OVERLOOKING

The buildings are positioned to limit overlooking of adjacent properties and have a flank to the north to not limit future development along Clapham Road.

BUILDING THE RIGHT HOMES

A considerate approach to scale

Our approach: The proposed massing mediates height between the Grantham Road Estate towers and surrounding lower housing surrounding the site.. The tower is located in the centre of the site where furthest from lower scale homes and where it can bridge over the underground line. This massing approach also maximises dual aspect homes for improved daylight and natural ventilation.

Future proof development potential

Our proposals are designed to integrate with potential future development phases along Clapham Road, including a pedestrian priority connection. This approach creates opportunities for improved connectivity without compromising the standalone quality of the first phase. It includes options for flank walls along the northern boundary and careful balcony positioning to limit overlooking of adjacent residents.

Our integrated architectural and landscape expertise, combined with extensive Lambeth experience and a proven track record in sensitive regeneration projects, positions us to deliver practical solutions that balance ambitious affordable housing delivery with genuine community benefit. By reflecting local character, working collaboratively and focusing on meaningful social value, we'll create a scheme that works for Hyde, the community and the wider area.

Sustainability

The building massing and orientation will enable the building to be highly performing in order to create resilient future proofed homes and target Net Zero.
Form factor: The building envelope is reduced using simple, stacking forms and cantilevered balconies.
Orientation: The building is orientated to harness solar gain with primary façades facing south, west and east.
Optimise for PV: PVs are located where they will be most effective, avoiding areas to the north of taller massing and trees. Areas without PVs will be used for green and brown roofs.

Net Zero Principles

- Compact stacking building massing. Low form factor.
- Optimal orientation. Elevations to balance heat gain, heat loss and daylight through window proportions and openings.
- Highly insulated building fabric
- Towards Net Zero carbon**
- Roof design optimised for PV and bio solar roofs
- Low carbon heating e.g. communal heat pumps
- Retaining existing and planting new trees for enhanced biodiversity

CVs

Vorley Road, residential with library and community facilities, Islington

Irene Craik Director

BArch (Hons) RIBA

Role for Rhodesia Road - Director in charge, overseeing the running of the project, the design and all presentations, and applying my considerable experience to steer the ship day to day.

I bring extensive experience to the Rhodesia Road project, having joined the Practice in 1996 and becoming a Director in 2002. My expertise spans specialist housing, urban renewal, and community buildings, ensuring a well-informed approach to design.

Expertise I bring to this project

- Extensive experience working with London borough councils and registered providers on residential and mixed used projects of all scales
- Housing expertise across all types - with particular specialism in across and older people's housing projects from concept through to delivery
- Experience delivering Passivhaus projects
- Expert in inclusive design and engagement
- Working across council ASC and Housing/ Development departments to join up differing client requirements into a cohesive brief

Selected Projects

Catford Police Station, Lewisham

Redevelopment and conversion of former police station for Phoenix Housing Group for 100% affordable 64 home scheme. Working to Passivhaus standards.

Friary Park, Ealing

Regeneration scheme providing 990 new homes close to the Crossrail station within an exemplar new masterplan.

Lisson Grove, Westminster

Flagship community Health and Wellbeing Hub for Westminster City Council providing health, community, further education and council services in one building, alongside significant new residential development. Stage 1 brief development and options appraisal

Douglas Bader Estate, Barnet

Regeneration of a 1960s low rise estate to deliver a more mixed and higher density community, of around 750 dwellings, involving intensive consultation with residents.

Carlton Dene, Westminster

Carlton Dene, Westminster City Council's flagship extra care scheme, provides 65 extra care and 22 general-needs homes adjacent to Grade I-listed St Augustine's Church. Dual-aspect homes, communal balconies, a public facing cafe. a generous courtyard and roof terraces encourage social interaction and meet HAPPI principles.

Hazelhurst Court, Lewisham

Working within the constraints of a tight urban plot, this scheme comprises 60 extra care homes within two new buildings, alongside integrated communal space. Being mindful that older people spend more time inside, the design is centred on the concept of bringing

the outside in and all homes are dual aspect to provide views of the courtyards and neighbouring streets. Similarly, a new garden room offers a generous, light-filled communal space between the two courtyards, each of which has a different character to provide a range of physical and visual stimuli for residents.

Buckleuch House, Hackney

This multi-generational project provides 107 homes for three different groups - first-time buyers, Orthodox Jewish families, and older residents needing extra care - within a single elegant building. Distinctive balconies address specific community needs, including open-air spaces for Sukkot celebrations, glazed balconies as extended living spaces, and adaptable HAPPI-standard layouts to enhance mobility for older residents.

Marion Court, Hackney

Redesign of a previously consented scheme in central Hackney, to deliver 160 new homes, community centre and commercial units to new Building Regs and viability targets for Hackney Council and their contractor partner. Stages 2-3

Simon Lea Director

BA DipDP DipArch RIBA

Role for Rhodesia Road - The Support Director will provide senior oversight and strategic support, ensuring quality, programme control and alignment with client objectives throughout the project.

I have been at the Practice since 2003. I have extensive experience of working on housing projects across the country, from small infill sites to large scale estate regenerations, for both public and private sector clients. With a strong understanding of policy and community consultation, I am adept at advising and engaging clients, stakeholders and local people throughout the design and development process.

Expertise I bring to this project

- Extensive experience delivering estate regeneration, masterplanning and options appraisals for local authorities
- Proven track record in leading refurbishment, retrofit, infill and full redevelopment strategies
- Strong expertise in resident-led engagement and stakeholder consultation processes
- Skilled in balancing policy requirements, viability and community priorities

Selected Projects

Lambeth Three Estates, Lambeth

Extensive options appraisals for three Lambeth Council Estates (Fenwick, Cressingham Gardens and Central Hill) reviewing regeneration options covering Refurbishment, Retrofit, Full Demolition and Replacement, and a Hybrid Option of partial demolition, infill, and retrofit of retained homes. The project involved extensive resident engagement to ensure that their views were reflected in the final Options Appraisal report.

Eastwood North and South, Wandsworth

Estate regeneration and infill housing project delivering new houses and apartment buildings to Passivhaus standards, along with landscape improvements for two 1930's estates in Wandsworth. Following careful engagement with existing residents the new homes will sensitively blend in with the existing estate whilst increasing safety at night with additional overlooking and improvements to lighting.

Brookhill Estate, Greenwich

Comprehensive estate regeneration delivering a new residential neighbourhood with a mix of typologies and tenures, increasing density and improving permeability and security.

Exeter Road Estate, Enfield

Masterplan for existing post-war estate set on the edge of a large park, including new infill and overbuild projects to provide new Council homes and extensive re-landscaping to provide new play spaces for new and existing residents, and to bring existing podium areas back into use.

Redbrick Estate, Islington

Redevelopment of an existing estate to provide 55 new homes, community facilities and an improved public realm and landscape.

Eastfields Estate, Merton

Resident-led masterplan for the regeneration of a rundown estate providing circa 650 new homes, open spaces and play areas, involving extensive community consultation and stakeholder engagement.

Elm Grove Estate, Sutton

Mixed-use town centre development with new homes fronting onto the key routes to improve security and generate activity. Tree planting and landscape interventions will contribute to a higher quality public realm and provide spaces for meeting, sitting and play.

Georgine Revell

Associate

BArch (Hons) PGDipArch MArch

Role for Rhodesia Road - Lead designer responsible for day-to-day management of the project, overseeing design development, and ensuring delivery of a high-quality, policy-compliant and buildable scheme through planning and technical stages.

I joined the Practice in 2011 and specialise in housing projects. I have a wealth of experience on complex mixed-use, multi-phased regeneration schemes across all tenures including specialist typologies. I also have particular expertise in housing standards and policy and have written a number of Design Guides and advised the GLA. I write the housing column in the Town and Country Planning Journal and lead much of the practice's work on housing research.

Expertise I bring to this project

- Extensive experience leading complex, mixed-use and multi-phased residential regeneration schemes across all tenures
- Proven track record of delivering high-density urban housing on constrained and sensitive sites
- Experienced in preparing hybrid applications, Design Codes and reserved matters submissions
- Deep knowledge of London Plan and GLA Housing Design Standards, including direct advisory experience
- Lead on housing research within the practice, ensuring projects reflect current best practice and innovation

Selected Projects

Friary Park, Ealing

Hybrid planning application for residential led, mixed-use estate regeneration, providing up to 990 homes close to a future Crossrail site. Outline application included a Design Code for the Estate. There are 500 homes in the detailed application, which also includes retail, café and community space.

Catford Police Station, Lewisham

Redevelopment and conversion of former police station for Phoenix Housing Group for 100% affordable 64 home scheme. Working to Passivhaus standards

Lisson Grove, Westminster

Creation of ambitious flagship Hub to combine health, community, wellbeing and council services alongside new council and private homes across two city-centre sites.

Augusta Street, Tower Hamlets

Development of local authority owned land to provide c.95 social rent homes with high proportion of family sized accommodation

Knapp Road, Tower Hamlets

Redevelopment of flatted block on Lincoln North Estate to provide 80 new homes with a heavy emphasis on family sized accommodation

Rooftop extensions, Tower Hamlets

Research into feasibility of extending existing buildings within Poplar HARCA's extensive housing stock to create new homes. Included pilot projects.

Exeter Road Estate, Enfield

Hybrid and reserved matters planning application for 129 new homes within an existing estate. Outline application included Design Code. Proposals include new flatted blocks, houses and bookend and rooftop extensions to existing housing with upgrades to the current homes, parking and landscape on the estate.

Acton Gardens, Ealing

Phase six of the masterplan for the South Acton Estate provides over 300 new mixed tenure homes, along with community centre, offices, gym, GP, youth centre, dentist café and retail spaces in two new buildings arranged around a new public park.

Sumner Road, Southwark

Redevelopment of a workshop site to provide 112 new mixed tenure homes along with a new community centre and green space, as part of the council's housebuilding programme.

Stanstead Road, Lewisham

New residential development to facilitate independent living for autistic young adults, featuring apartments, a communal lounge and sheltered garden.

Arlington House, Camden

Transformation of an Edwardian hostel building into mixed-tenure accommodation with community conference and training facilities.

Cooks Road, Newham

Design and delivery of a new residential quarter on Pudding Mill Island, comprising 194 new homes, 2,000m² commercial space and public realm improvements.

Annikki Mair

Senior Architect

MArch (Hons) MA (Hons) DipArch

Role for Rhodesia Road - Responsible for day-to-day architectural design development

I joined Levitt Bernstein in 2017, initially as a Project Architect before progressing to the role of Senior Architect in 2019. I have worked on a number of large scale regeneration schemes, many of which have required extensive programmes of resident and community consultation and engagement. I studied architecture at the University of Edinburgh, and qualifying as a registered architect in 2015.

Expertise I bring to this project

- Experience delivering large-scale residential regeneration and mixed-use schemes
- Extensive experience in resident and community engagement ensuring proposals respond to local priorities
- Strong background in urban infill and constrained city-centre sites
- Delivery of Passivhaus and low-energy housing projects

Selected Projects

Levitt Bernstein

(2017-present)

Marian Court, Hackney

Residential led mixed use scheme providing circa 160 new homes, a community centre and flexible commercial.

Friary Park, Ealing

Regeneration scheme providing 990 new homes, community spaces and flexible retail.

Douglas Bader Estate, Barnet

Regeneration of a 1960s low rise estate to deliver a more mixed and higher density community, of around 750 dwellings, involving intensive consultation with residents.

Plashtet Road, Newham

A Passivhaus scheme for LB Newham on a tight urban site delivering 65 new homes and nursery using the site's historical context to inform the new vernacular.

High View, Hertfordshire

Masterplanning and detailed design of new housing, shops and community buildings to redevelop an existing neighbourhood centre in Hatfield, originally built as part of the post war New Towns Programme.

Dorset Street, Dublin

Redevelopment of existing estate to provide approx. 200 new Council homes on a prominent city centre site, and a range of community facilities including Boxing and Karate Clubs, a crèche, shops and a café, centred around a new neighbourhood square.

Unit Architects

(2014–2017)

Whitechapel Square, London

Regenerating the site of an existing supermarket into a major mixed use scheme centred around a series of new public squares. The proposals, submitted in March 2015 include retail, cafés, restaurants, education facilities, and over 470 mixed tenure homes.

Chapel Square, London

Regeneration of the an existing supermarket in Ilford into a major mixed use development set within a revitalised public realm. The scheme comprises a new supermarket, cafés, restaurants, employment space and over 680 mixed tenure homes.

Colindale Gardens, London

This scheme for Redrow London forms part of the Colindale Gardens Masterplan, containing 483 residential units, is formed from three residential buildings (E, F & G) arranged around a central green space.

Further experience

Resond Design Guide, Ireland

Setting out best practice guidance for Respond housing association.

Sainsbury's Feasibilities Manual.

Contributed to compiling guidance for architects.

Design Tutor - University of Greenwich

Consultation event at Douglas Bader Estate, Barnet

Kate Digney

Studio Director Landscape

BSc (Hons) DipLA CMLI

Role for Rhodesia Road - Responsible for leading the urban design and landscape strategy, ensuring seamless integration with the architectural approach.

I have over 20 years' experience working with private and public sector clients in the design and delivery of landscape and public realm spaces. Having studied both landscape and ecology, I have expertise in design for biodiversity, urban tree planting and sustainable urban drainage systems across a range of scales, promoting sustainable, place-sensitive design. A long-standing aptitude for engaging stakeholders and communities led me to develop a specialism in co-design - working with lived experience to deliver resilient spaces, reflecting the needs of people and a changing climate.

Expertise I bring to this project

- Over 20 years' experience delivering landscape-led regeneration and infill housing schemes across London, including resident-led estate renewal and high-density urban sites.
- Specialist in co-design and stakeholder engagement, using lived experience to shape inclusive public realm, play and communal spaces in sensitive contexts.
- Expert in biodiversity, urban tree strategy and SuDS integration, ensuring new development maximises ecological value while responding to existing tree constraints and root protection areas.
- Strong track record integrating landscape with architecture on constrained sites, creating layered public, communal and private spaces that enhance residential amenity.

Selected Projects

Down Lane Park, Haringey

Park regeneration masterplan developed through co-design process. Proposals include a new hub building, community garden, inclusive play, sports courts and spaces for young people and women.

Hazelhurst Court, Lewisham

Extra care scheme of 60 apartments for older people, based on the design concept of bringing the outside in with two large courtyards connected by a communal garden room.

Achilles Estate, Lewisham

Estate regeneration between Fordham Park and New Cross Road on a constrained urban site. Proposed mosaic of new external spaces to support new homes with new commercial/retail within a transformed and vibrant piece of public realm. Kate oversaw landscape design by others from RIBA 2 to 3.

Melfield Gardens, Lewisham

Passivhaus, intergenerational housing scheme mixing older people with post-graduate students in a tight infill site. Shared-surface pedestrian street with careful integration of courtyard spaces and existing tree cover.

Vorley Road, Islington

A net zero carbon development delivering 75 new Passivhaus homes and a library and GP surgery in Archway town centre.

Ocean Estate, Stepney

Large scale masterplan for a residential-led regeneration, featuring 1,040 new mixed tenure homes and extensive streetscape, courtyard and park design.

Aberfeldy New Village, Tower Hamlets

Detailed design and delivery of a regeneration masterplan, including a new civic square; extensive podium landscape design with private courtyard landscapes; integrated informal play; specialist planting design and a public art and wayfinding strategy.

Eastfields, Merton

A resident-led masterplan for the regeneration of a rundown estate providing circa 650 new homes, open spaces and play areas, involving extensive community consultation and stakeholder engagement.

South Thamesmead Public Realm, Bexley

Phased public realm strategy to enhance and improve one of existing neighbourhood areas designed in brutalist architectural style. Design code accompanying strategic proposals and delivery of phase one on site currently.

Sutherland Road, Waltham Forest

Redevelopment of a former industrial site into a new residential community, with 59 affordable homes, a health centre and shared garden.

Sumner Road, Southwark

Redevelopment of a workshop site to provide 112 new mixed tenure homes along with a new community centre and green space, as part of the council's housebuilding programme.

Visakha Sroy

Project Landscape Architect

BSc (Hons) MA PGDip, CMLI

Role for Rhodesia Road - Responsible for day-to-day landscape architecture design development

I am a Chartered Landscape Architect with a Master's degree from Birmingham City University, after having originally completed a Bachelor's degree in Geography in Bath. With a strong understanding of sustainability and natural ecosystems, Visakha developed a deep interest in spatial awareness and the relationship between people's movement and their emotional responses to the environment. This led her to become passionate about how thoughtful landscape design can enhance the lives of local communities and truly reflect their identity.

Expertise I bring to this project

- Experienced in co-design and community engagement, leading intensive consultation processes that shape inclusive, identity-driven public realm and parkland strategies.
- Skilled in integrating play, biodiversity uplift and tree canopy strategies within constrained estate regeneration and infill housing sites
- Strong understanding of how movement, spatial sequencing and sensory experience influence wellbeing, informing the design of layered communal and amenity spaces.
- Experience delivering landscape strategies from masterplanning through to detailed design, ensuring continuity of ecological and placemaking objectives.

Selected Projects

Levitt Bernstein

(2021-2024)

Down Lane Park, Haringey

Development of proposals for parks refurbishment at the heart of Haringey's new District Centre through an intensive co-design process with local residents and stakeholders. After rigorous consultation and engagement with community and ecology at the heart, the project was completed spring 2025. This project won the Landscape Institute Award 2025 for Excellence in Collaboration, Engagement and Influence.

Catford Police Station, Lewisham

Landscape design to support new affordable homes for PCH, converting and extending a building of local significance. Richly planted courtyards with new public route with play-on- the way and pedestrian/cycle priority.

Eastwood North and South, Wandsworth

Small scale estate regeneration and infill housing project on two estates in Wandsworth. New landscape strategies for play provision, tree canopy cover and biodiversity uplift to bed in new homes.

Acre Road, Royal Borough of Kingston-Upon-Thames

A development of 49 dwellings designed to support older people and people with learning disabilities, with carefully considered landscape design providing enriching outdoor spaces for residents, whilst working creatively within a challenging and constrained site.

Fairlop Waters Country Park, Redbridge

Emerging masterplan proposal for the 230 ha Country Park. The masterplan develops Redbridge council's objective to opening up to a wider range of leisure, recreational and cultural uses; whilst promoting the site to becoming a significant local/regional destination, within an ecological based context. 500 Wembley High Rd, Wembley Demolition of existing commercial building and re-provision within a new 18 and 5 storey building containing an additional 79 dwellings and associated amenity space'. Currently at RIBA stage

Reardon Court, Enfield

Extra care centre with 69 units providing a variety of landscapes with particular focus on sensory experiences.

Jon Sheaff & Associates

(2015-2021)

Lowestoft Heritage Acton Zone feasibility and masterplan

2 emerging masterplan proposals for the North and South of Lowestoft Heritage Action Zone as part of the £25million Towns Fund project, to enhance Lowestoft's public realm and support its regeneration.

Silkstream Park and Montrose Playing Fields, Colindale

£5mill park refurbishment project with intense flood attenuation intervention scheme, new play facilities, building and sports area. Haringey Asset Management Development of GIS database to provide Council with full audit of its assets in all open spaces across the Borough, for use by Haringey to manage and maintain its contracts and maintenance for its parks and green spaces
